

Better by Design

Superior engineering makes SeamSafe™ the safest standing-seam roof anchor available. *Why trust fall protection to anything less?*

SeamSafe compared to other anchors:

- Twice the locking surface of other anchors.
- Lower profile geometry to reduce slip potential.
- Lighter and more portable (6.75 - 8.00 lbs).
- Single-wrench installation.

SeamSafe™ - The Original Standing-Seam Roof Anchor

simple | safe | portable

The SeamSafe™ Roof Anchor is a light-weight safety device that can be installed on most standing-seam roof systems quickly and easily. The portable device weighs 6.75 - 8.00 lbs, can be installed with only one wrench, and provides fall protection for up to 5000 lbs.

The anchor can be transported to a roof hands-free by being clipped to the roofer's belt using the included clip. It also can be easily repositioned as the roofer works.

Quick-Release Clip included
Wrench not included

3 Models to Choose from:

The SeamSafe™ Roof Anchor consists of two blocks of high-grade 6061-T aircraft aluminum machined to form a high-capacity clamping device. Three bolts with locking washers and nuts connect the aluminum blocks.

The anchor functions by loosening the nuts, separating the blocks, and fitting them over a single standing seam. Once positioned, the nuts are tightened with a 3/4-inch, box-end wrench.

The SeamSafe™ Roof Anchor is only 12" long, 3 - 4" tall, and 2 - 2.5" wide, yet it is made from the strongest materials. The anchor blocks are machined from solid 6061-T aircraft aluminum and held together by half-inch, grade-8 shank bolts. The quarter-inch, solid, stainless-steel "D" ring can be secured to any tethering device and harness.

The SeamSafe™ Roof Anchor has been thoroughly

M1 OPENING
Max Seam Height - 1 1/4"
Max Seam Width - 5/8"

M2 OPENING
